

PROJECT CASE STUDY

TRUFLOW SPRAY BOOTHS (AUST)

**PROJECT: SEMI TRAILER PAINTING
STATE INSTALLED: VIC / NSW / QLD & SA**

CROSSFLOW SPRAY BOOTH

A crossflow spray booth provides a compliant spraying environment. Crossflow Spray booths are an ideal solution for workshops looking to economically paint large equipment and trucks. Suitable for all types of re-finishing applications this range is an economical purchase in virtually unlimited sizes. A Crossflow spray booth is by far the most cost-effective Truck Spray Booth and provides a solution which takes up the smallest factory footprint.

Recent installations by Truflow include: Krueger Trailers
NSW and AA Semi Trailers VIC

SEMI DOWNDRAFT BOOTH

The reference to Semi Downdraught comes from the “push and pull” design of this booth. The air is delivered via a supply fan partially through the ceiling of the booth. This air is filtered and provides the you with the option of heating as a standard feature or a future upgrade. For this reason the Semi Downdraught is a very popular choice in the Truck re-finishing sector where heating is required and a quality finish is desired in a very economical package.

Recent installations by Truflow include: Boarder Cranes VIC, Coleman Equipment NSW & Lindsay Transport NSW

**Spray Booth
solutions to
suit
customers
exacting
requirements.
That's what
we do.**
